Project 17-2: Student Registration GUI Application

Provide the project problem statement. Explain what you are trying to accomplish in broad terms.

The objective is to create an intuitive and user-friendly registration form where users can easily input their information. The application should provide immediate feedback on the entered data, generating a temporary password if the required information is provided and giving clear error messages if not. This ensures a smooth user experience and helps users understand how to use the registration form effectively.
